

Euromix Concrete Ltd
Sustainability Policy (January 2011)

Euromix Concrete Ltd is an independent company specialising in the design, manufacture and supply of Ready Mixed Concrete. The company places particular emphasis on experience, expertise, capability, reliability, quality and the ability to satisfy customer requirements. Euromix Concrete Ltd is a member of the Quality Scheme for Ready Mixed Concrete (QSRMC) operating to procedures compliant with ISO 9001 and is now committed to a policy of promoting sustainability in our concrete production operations. We feel that this is an appropriate goal for our organisation, our customers and the wider community at this point in time and our aim is to continually improve our sustainability credentials as technology advances and regulatory changes come about.

- Our key goal is where possible to source materials from suppliers who operate an EMS system compliant to ISO 14001 assessed by a UKAS registered body or who hold certification to either BES 6001 or BS8902.

We also monitor our performance using these key performance indicators (KPI's);

- To monitor mains water usage as a percentage of production.
- To monitor the use of recycled/secondary aggregates as a percentage to replace primary aggregates.
- To monitor the mass of waste dumped to landfill as a proportion of production output.
- To monitor the percentage of cement replaced by additional cementitious materials.
- To purchase vehicles compliant with European Union emissions regulations.
- To monitor and where possible reduce the CEM I cement content per cubic metre.

These KPI's will be reported and monitored at our management meeting and will be continually assessed for improvement in accordance with the principles of ISO 9001.

Stephen Nicklen
Managing Director
