

Euromix Concrete Ltd Concrete Testing Charges

Testing is only undertaken in agreement with Euromix Concrete Ltd Technical manager 24 hours in advance of the date required.

All our concrete is produced in accordance with BS8500-2 conformity criteria which requires us to advise customers if a strength non conformity is recorded that fails to comply with fck-4 (Characteristic strength -4N/mm²). This notification is required to be advised no later than 2 weeks after the non conformity was discovered.

BS8500-2 advises that the use of companies holding third party certification such as QSRMC certification and using designated concretes only require identity testing to confirm concrete strength.

Our testing regime is essentially random with the aim of visiting as many sites as possible.

Where clients require information in addition to this, or you require guaranteed attendance, we offer the following service.

For £85-00 + VAT we will test one load of concrete (including a slump test), making up to four 100mm cubes. A certificate of testing will then be emailed at 7 and 28 days (or other age if required).

Where a guaranteed attendance is not required, we offer the following service.

For £10-00 + VAT we will forward a spreadsheet of results from our random testing regime covering your site. N.B. **£10-00 + VAT** will be charged for every spreadsheet issued (to cover administration costs). This will be sent by email.

Please contact our technical manager to discuss your exact requirements and to set up an arrangement
